MINI PROJECT

Voice Hub - Complaint Management System

- Developed a complaint management system using Java, JDBC, MySQL, Servlets, and JSP to handle user grievances efficiently.
- Designed and implemented CRUD operations for complaint registration, tracking, and resolution.
- Built an interactive web interface using JSP and Servlets for smooth user and admin interactions.
- Ensured secure data handling and optimized database queries for better performance.
- Strengthened backend development skills, focusing on database connectivity, user authentication, and system reliability.

Talent Navigator - Career Guidance Platform

Technologies: Java, JDBC, MySQL, Servlets, JSP, HTML, CSS

- Developed a career guidance platform to help users explore job opportunities and career paths.
- Implemented two user roles:
Users: Search for jobs and receive career advice.
Successors: Share career journeys and roadmaps.
- Designed and managed a MySQL database for efficient storage and retrieval of user and roadmap data.
- Built dynamic web pages using JSP, Servlets, HTML, and CSS for a seamless user experience.
- Strengthened backend development skills with a focus on role management, database connectivity, and system performance.
